Electricity to use in Shiraoi interchange transformer substation, contract power : 65 kW The estimated electricity consumption for the delivery period : 880,000 kWh

Electricity to use in Hagino parking area transformer substation, contract power : 30 kW The estimated electricity consumption for the delivery period : 350,000 kWh

Electricity to use in Kojohama tunnel transformer substation, contract power : 130 kW The estimated electricity consumption for the delivery period : 1,010,000 kWh

Electricity to use in Noboribetsuhigashi interchange transformer substation, contract power : 78 kW The estimated electricity consumption for the delivery period : 920,000 kWh

Electricity to use in Tomiura parking area transformer substation, contract power : 27 kW The estimated electricity consumption for the delivery period : 360,000 kWh

Electricity to use in Horobetsu tunnel transformer substation, contract power : 129 kW The estimated electricity consumption for the delivery period : 1,000,000 kWh

Electricity to use in Noboribetsumuroran interchange transformer substation, contract power : 74 kW The estimated electricity consumption for the delivery period : 930,000 kWh

Electricity to use in Sapporo interchange transformer substation, contract power : 197 kW The estimated electricity consumption for the delivery period : 2,360,000 kWh

Electricity to use in Kitago interchange transformer substation, contract power : 36 kW The estimated electricity consumption for the delivery period : 510,000 kWh

Electricity to use in Oyachi interchange transformer substation, contract power : 47 kW The estimated electricity consumption for the delivery period : 630,000 kWh

Electricity to use in Sapporominami interchange transformer substation, contract power : 201 kW The estimated electricity consumption for the delivery period : 2,650,000 kWh

Electricity to use in Kitahiroshima interchange transformer substation, contract power : 182 kW The estimated electricity consumption for the delivery period : 2,430,000 kWh

Electricity to use in Wattsu parking area transformer substation, contract power : 477 kW The estimated electricity consumption for the delivery period : 6,470,000 kWh

Electricity to use in Eniwa interchange transformer substation, contract power : 64 kW The estimated electricity consumption for the delivery period : 870,000 kWh

Electricity to use in Chitoseeniwa junction transformer substation, contract power : 38 kW The estimated electricity consumption for the delivery period : 390,000 kWh

Electricity to use in Chitose interchange transformer substation, contract power : 95 kW The estimated electricity consumption for the delivery period : 1,230,000 kWh

Electricity to use in New Chitose Airport interchange transformer substation, contract power : 61 kW The estimated electricity consumption for the delivery period : 630,000 kWh

Electricity to use in Kariki interchange transformer substation, contract power : 50 kW The estimated electricity consumption for the delivery period : 530,000 kWh

Electricity to use in Fushiko interchange transformer substation, contract power : 35 kW The estimated electricity consumption for the delivery period : 470,000 kWh

Electricity to use in Sapporokita interchange first transformer substation, contract power : 44 kW The estimated electricity consumption for the delivery period : 560,000 kWh

Electricity to use in Sapporokita interchange second transformer substation, contract power : 53 kW The estimated electricity consumption for the delivery period : 650,000 kWh

Electricity to use in Shinkawa interchange transformer substation, contract power : 44 kW The estimated electricity consumption for the delivery period : 590,000 kWh

Electricity to use in Sapporonishi interchange transformer substation, contract power : 77 kW The estimated electricity consumption for the delivery period : 1,010,000 kWh

Electricity to use in Teine interchange transformer substation, contract power : 36 kW The estimated electricity consumption for the delivery period : 430,000 kWh

Electricity to use in Zenibako interchange transformer substation, contract power : 73 kW The estimated electricity consumption for the delivery period : 750,000 kWh

Electricity to use in Hariusu tunnel transformer substation, contract power : 92 kW The estimated electricity consumption for the delivery period : 960,000 kWh

Electricity to use in Asari interchange transformer substation, contract power : 118 kW The estimated electricity consumption for the delivery period : 1,500,000 kWh

Electricity to use in Asari tunnel transformer substation, contract power : 116 kW The estimated electricity consumption for the delivery period : 1,000,000 kWh

Electricity to use in Wakatake tunnel transformer substation, contract power : 97 kW The estimated electricity consumption for the delivery period : 670,000 kWh

Electricity to use in Chitosehigashi interchange transformer substation, contract power : 62 kW The estimated electricity consumption for the delivery period : 710,000 kWh

Electricity to use in Oiwakecho interchange transformer substation, contract power : 69 kW The estimated electricity consumption for the delivery period : 780,000 kWh

Electricity to use in Kuriyama tunnel transformer substation, contract power : 102 kW The estimated electricity consumption for the delivery period : 1,080,000 kWh

Electricity to use in Yubari tunnel transformer substation, contract power : 38 kW The estimated electricity consumption for the delivery period : 310,000 kWh

Electricity to use in Hokkaido Regional Head office building transformer substation, contract power : 347 kW The estimated electricity consumption for the delivery period : 5,270,000 kWh

Electricity to use in Ebetsunishi interchange transformer substation, contract power : 93 kW The estimated electricity consumption for the delivery period : 920,000 kWh

Electricity to use in Nopporo parking area transformer substation, contract power : 50 kW The estimated electricity consumption for the delivery period : 620,000 kWh

Electricity to use in Ebetsuhigashi interchange transformer substation, contract power : 77 kW The estimated electricity consumption for the delivery period : 910,000 kWh

Electricity to use in Iwamizawa interchange transformer substation, contract power : 132 kW The estimated electricity consumption for the delivery period : 1,770,000 kWh

Electricity to use in Iwamizawa service area transformer substation, contract power : 188 kW The estimated electricity consumption for the delivery period : 2,600,000 kWh

Electricity to use in Mikasa interchange transformer substation, contract power : 63 kW The estimated electricity consumption for the delivery period : 810,000 kWh
