6　Summary

(1)　Classification of the products to be procured : 14

(2)　Nature and quantity of the products to be rent : The computer system for education in The College of Information Science 1 Set

(3)　Type of the procurement : Rent

(4)　Basic requirements of the procurement :

A　The computer system is procured for use in the college education for undergraduate course of information science and the related master's course. The system also provides general information infrastructure for making reports, information searching, e-mails, and other purposes.

B　The system must have fundamental software for basic information science related education and for the general information infrastructure to all students of the college and the related graduate school. It must also have a variety of software for professional education.

C　The system includes the following server systems :

(a)　file server, backup server, computation server, virtual machine server,

(b)　network virtual server, VDI management and operation virtual server, printer management virtual server, which are built on the virtual machine server, and

(c)　servers needed for managing the system.

D　Main clients should be laptop PCs personally owned by the users. Users run virtual desktop clients, connect to user virtual machines, and use system resources that are available under various operating systems.

E　The user virtual machines must have enough ability for processing multimedia data, like audio, video and graphics.

F　The disk images of user virtual machines must be managed in an integrated fashion. The system must have a function to manage multiple disk images easily. The system must also allow users to select a disk image when booting. Users can add a disk image.

G　The system must have enough efficiency to ensure smooth operation when many user virtual machines boot at the same time during a class.

H　All related undergraduate and graduate students must be identified by user IDs in this system. The authentication in this system must collaborate with University of Tsukuba Unified Authentication System.

I　The system must be designed as power-saving and space-saving.

J　Since the system must operate 24 hours a day, the system supplier must organize the procedures responsible for prompt and comprehensive system maintenance to handle system failures. The system failures must not interfere with the classes.

K　The system must have high level of security, considering current threats on the network.

L　In order to support educational activities, it should be possible to install new software as required by teachers during the rental term as a work of system maintenance.

M　The system supplier must sufficiently support the university during and after the system installation.

N　The system supplier must do data transition from the current system.

O　The system must have functions and structures that minimize management／operation cost.
