(4) Basic requirements of the procurement : The main purpose of the system is to provide IT (Information Technology) authentication infrastructure for all members in Osaka University. We need to construct CA／RA system, Master database system to realize the authentication and authorization function based on the CA／RA system. Here are the basis requirements to fix the specification of Campus-wide IT Authentication Platform System.

A The system consists of the following sub-systems : CA／RA system, SSO (Single Sign-On) system, and Master database system.

B CA／RA system consists of CA and RA functions.

C CA function must provide functionalities to issue／revoke digital certificates regarding digital signature and digital authentication procedures.

D RA function must behave as a front-end for the CA system, and provide interfaces to maintain system users and digital certificates.

E SSO system consists of function for SSO authentication／authorization and handover of authorization.

F Function for SSO authentication and authorization must provide the following requirements. (a)SSO function conform to SAML 2.0 for campus-wide service associated with the cooperative on SSO authentication and authorization. (b)Login authentication and authorization function by ID／password and PKI.

G Function that Authorization assigned for a user enable to delegate for other user in campus-wide service associated with the cooperative on SSO authentication and authorization must provide as function for handover of authorization.

H Master database system must provide the following functions. (a)Function to edit and update attribute information for each user obtained from the registration authority in office. (b)Function to provide attribute information editted by (a) as an available data format for RA system, SSO system and other campus systems. (c)Function to open attribute information editted by (a) to other campus systems. (d) Function for books output to distribute for users system information such as ID.

I Countermeasure to avoid the stop of system service by the redundancy of server and network in system fault must be provided.

J Function to generate total report according to the request of Osaka University by collection and integration of all system log must be provided.

K Technical supports including regular maintenances, recoveries from failures and consulting in system operations must be provided to avoid system crashes.

L Function to detect fault by Network monitoring, Life and Death check of critical services such as SNMP in remote maintenances must be provided.

M Neccessary transitional measures must be taken in order to adapt currently running campus systems receiving SSO authentication service and it's data to a new IT authentication Platform system and to ensure the same level of service.
