5　その他
この導入計画の詳細は導入説明書による。なお、本公表内容は予定であり、変更することがあり得る。
6　Summary
⑴　Classification of the products to be procured : 26
⑵　Nature and quantity of the products to be purchased
Isolated Display Cases
⑶　Type of the procurement
Purchase
⑷　Basic requirements of the procurement
1）Air Exchange Rate
0.15 times／day or fewer
2）Main Body (Base Part)
Steel, baked-on coating (The coloring shall be the same as the wall surfaces in the New East Wing.)
3）Glass
Low-reflection super-clear laminated glass
4）Opening and Closing Methods
Drawer in front＋two-tiered rail slide opening and closing method (retractable to 70% or above) using an electric slide
5）Internal Stage
Cloth covered
6）Lighting
Use dimmable LED lighting for the ceiling and the floor. The floor lighting should be a type that can be taken out when the lights are in use and stored away when they are not in use. Install dimmable fiber optic lighting in the ceiling and floor. The fiber optic lighting must be movable and move 60 degrees or more in the vertical direction. The fiber optic lights shall be placed one meter apart. Install a wiring duct in the ceiling.
7）Humidity Regulation
Relative humidity can be set to 40% to 70%, and the fluctuation in the course of one day shall be ±1.5% or less.
Should be easy to maintain.
8）Wall Surfaces
Apply cloth coverings to wall surfaces and install rails for hanging paintings on the upper parts of the walls.
Design the A-type wall surfaces so that they are electrically movable up to 50 centimeters from the glass. (Make them the same as the base isolated display cases in the New West Wing, North Display Room ⑴ so that a stepladder can be put in.)
Design the B-type wall surfaces so that they can be removed manually and can be viewed from both sides.
Design the C-type wall surfaces so that they are stationary, and install electric hoist batons for hanging paintings in front of wall surfaces (refer to the New East Wing's eastern wall surfaces (the paper lantern coverings)).
9）Base Isolators
Attach base isolators to the A and B types.
The base isolation direction should be two-dimensional base isolation in the horizontal direction. Must be capable of damping a seismic wave equivalent to that in the earthquake in southern Hyogo Prefecture in 1995 (818gal) to a maximum response acceleration of 80gal or less. The allowable displacement in the horizontal direction shall be 300mm or less.
Use a structure that ensures that the upper display cases cannot be moved manually at normal times.
10）Materials Used
The materials used should not emit volatile organic compounds (VOCs). The measured level of VOCs should be below the threshold values for indoor concentrations of chemical substances set by the Ministry of Health, Labour and Welfare.
11）Size
＊A type : W10000×D2500×H4600
(650 or less up to the bottom of the display case floor (base isolator included))
＊B type : W4000×D2000×H3500
(650 or less up to the bottom of the display case floor (base isolator included))
＊C type : W8000×D1300×H6500
(No base isolator. Can be supported from the upper ceiling hanging iron frame.)
As a general rule, use of floor anchors which may cut the upper part should be avoided for all the types.
⑸　Time limit for the submission of the requested material
5 : 45 PM 10. September. 2009
