⑶　Type of the procurement : Rent
⑷　Basic requirements of the procurement :
A　The computer system totally and efficiently processes the various academic affairs centered on the school register management and the school affairs management, supporting about twenty thousand users including teaching staff members and students of Kobe University.
B　Taking over fully to the resources (the data) which the present system possesses, the computer system should realize the feature equal to or above the present system, and the feature to add newly to it. Also, it should maintain the extensity and the flexibility which make it possible to add the addition performance which becomes necessary in future.
C　Providing various services by the smooth communication through the Kobe University Hyper Academic Network, the computer system should have the security function and performance enough for blocking illegal access. Moreover, it should have the performance which secures the appropriate response speed even if about 1500 information media terminals use it at the same time.
D　The computer system should be able to do the various servicing according to user's attribute after authenticating each student and each teaching staff member by the Kobe University user authentication system (the LDAP server). It should also support mobile environment for some services.
E　The computer system should be able to manage by the access limitation to the application and by the operation log and so on. And, it should take security measures to the connection from the server main unit and via the network from the client.
F　The computer system should be space-saving and energy-saving. Also, it should have automatic operation and an auto-backup feature. It should be a higher fault tolerance system. As to the server equipment and so on, a power should be secured by using the UPS with the built-in accumulator whose lifetime is assured during the borrowing period.
G　The computer system should be designed so that it is simple and easy to operate in that the user-friendliness and the usability is high.
H　The main system operates basically for 24 hours. In order to realize smooth operation, supplier of the computer system establishes a maintenance system, and a restoration system in case of the fault. Also, the supplier supports the operation sufficiently in and after delivering, and answers the questions about the operating method of the main system and so on from the users.
I　The present system is cooperating with the other information systems, doing data transfer, an authentication and so on. The seamless cooperation with those systems is necessary. The supplier should confirm beforehand in detail and make sure that there is not leakage.
J　The computer system should be reliable sufficiently and be the system which operates stably. The supplier provides both the hardware and the software which are necessary for the operation.
