5. Notwithstanding the suspension of cooperation under this Agreement or termination of this Agreement, Article 1, Articles 4 to 9, and Articles 12, 14 and 15 of this Agreement shall continue in effect.

In witness whereof the undersigned, being duly authorized by their respective Governments, have signed this Agreement.

Done at Tokyo on the twelfth day of May, 2009, in duplicate, in the Japanese, Russian and English languages, all texts being equally authentic. In case of any divergence of interpretation, the interpretation shall be made in accordance with the English text.

Annex A

Part A

1. Deuterium and heavy water:

Deuterium, heavy water (deuterium oxide) and any other deuterium compound in which the ratio of deuterium to hydrogen atoms exceeds 1:5000 for use in a nuclear reactor as defined in paragraph 1 of Part B below, in quantities exceeding 200 kg of deuterium atoms in any period of 12 months.

2. Nuclear grade graphite:

Graphite having a purity level better than 5 parts per million boron equivalent and with a density greater than 1.50g/cm3 for use in a nuclear reactor as defined in paragraph 1 of Part B below, in quantities exceeding 30 metric tons in any period of 12 months.

Part B

1. Complete nuclear reactors:

Nuclear reactors capable of operation so as to maintain a controlled self-sustaining fission chain reaction, excluding zero energy reactors, the latter being defined as reactors with a designed maximum rate of production of plutonium not exceeding 100 grams per year.

2. Nuclear reactor vessels:

Metal vessels, or major shop-fabricated parts therefor, especially designed or prepared to contain the core of a nuclear reactor as defined in paragraph 1 above, as well as relevant nuclear reactor internals as defined in paragraph 8 below.

3. Nuclear reactor fuel charging and discharging machines:

Manipulative equipment especially designed or prepared for inserting or removing fuel in a nuclear reactor as defined in paragraph 1 above.

4. Nuclear reactor control rods and equipment:

Especially designed or prepared rods, support or suspension structures therefor, rod drive mechanisms or rod guide tubes to control the fission process in a nuclear reactor as defined in paragraph 1 above.
