6　Summary
⑴　Classification of the products to be procured : 14
⑵　Nature and quantity of the products to be rent : Computer System for Advanced Information Education 1 Set
⑶　Type of the procurement : Rent
⑷　Basic requirements of the procurement :
A　The system should consist of personal computer terminals, mobile terminals, file servers, general servers for education, lecture-capture, management and distribution servers, equipment for advanced information education, and mobile access equipment to advance IT use in teaching and learning at Kyoto University, including advanced information education in specified disciplines and general information education.
B　The system must allow all staff and students in Kyoto University, specifically, Graduate School of Informatics and Undergraduate School of Informatics and Mathematical Science, to register their accounts for use. The total number of accounts must assure the annual overlapping between freshmen's accounts and graduates' accounts. The system must use Kyoto University Integrated Authentication System in authenticating registered users. The personal computer terminals, mobile terminals and file services must be available by more than several hundred users simultaneously with sufficient response.
C　The system must support classes of advanced information education for undergraduates and graduates in computer science and informatics, general information education for all students in Kyoto University, self-learning of general information processing, and ICT use of education in general with sufficient functions and performance.
D　The system must have widely used and up-to-date fundamental software for sufficiently good information and media processing environment and must be composed of hardware devices on which the software can be operated efficiently.
E　The system must have software required for advanced and general information education, self-learning and interactive learning.
F　The system should be able to act sufficiently when a dueprotection of personal information or a measure about information security was required.
G　The system must be highly reliable, and stable operation must be possible.
H　The system must be able to connect with Kyoto University Integrated information Network System (KUINS) and the Internet, and communicate inside and outside the university through them.
I　This system is operated throughout the day. The system supplier must have an organization responsible for quick and perfect system maintenance in which system failures to be promptly and perfectly handled. The system failures must not interfere with classes.
J　The system must have labor saving and energy-saving devices with better capacity for smooth and effective operation and management of the system.
K　The system supplier must sufficiently support the university during and after system installation.
L　The system must be able to smoothly take over the current processes and services, and all the related data resource from the present system.
