N　Data Migration, Expandability, and Integration with Other Systems

The system shall be capable of migrating all historical records, including those of graduates and program completers, from the current Academic Affairs Information System, including student registration information, curriculum information, course registration information, grade information, academic determination records, advising records, and other information designated by the University.

Data migration shall be performed in consultation with the University regarding the scope of migration, migration methods, and verification procedures, so as to prevent data loss, duplication, character corruption, inconsistencies among related information, and other migration-related issues.

The system shall be configured to flexibly accommodate future functional enhancements and integration with other systems utilized by the University. Such systems are expected to include authentication infrastructures (such as LDAP and Active Directory), Learning Management Systems (such as Moodle), automatic certificate issuance systems, e-mail systems, and other campus information systems. However, for systems whose integration targets or integration methods have not yet been determined, integration with any specific product or method shall not be mandatory.

O　Test Environment

The system shall provide a test environment separate from the production environment in order to allow advance verification and testing prior to changes to the production environment.

Such testing shall include, but not be limited to, functional enhancements, configuration changes, responses to legal or regulatory changes, software version upgrades, and other modification activities.

The test environment shall provide the functions and configuration necessary to verify settings, functions, and modifications before they are applied to the production environment and to confirm that such changes will not adversely affect production operations.

P　Operation Management and Maintenance Support

The system shall provide functions necessary for stable operation, including operation management, system monitoring, fault monitoring, backup processing, data recovery, operation log retention, and other operational management functions.

The system shall be configured with sufficient consideration for reducing operational workload and supporting continuous long-term use.

The vendor shall maintain a support structure capable of providing fault response, inquiry support, and assistance in responding to legal, regulatory, and institutional changes under annual maintenance agreements concluded with the University.

The vendor shall conduct proactive monitoring and maintenance activities in order to prevent system failures and shall provide a support framework capable of promptly identifying causes, assessing impacts, implementing temporary measures, and restoring services when failures occur.

Upon implementation of the system, the vendor shall provide operational training necessary for faculty members and administrative staff to appropriately use the system, with the content of such training to be determined in consultati
