X　Provide the information necessary to achieve data communication and system linkage with various utilization systems “MID-NET”, “Diabetes J-DREAMS”, “Cancer Registry”, etc., which are participating as national projects, policies, and research projects.

Y　In preparation for earthquakes, etc., data provision and system linkage should be possible smoothly to the disaster countermeasures and medical information backup project operated by the National University Hospital (BCP). The continuity of SS-MIX2 data used for referencing medical information in the event of a disaster in this project should be ensured with the data already stored.

Z　Appropriate information must be provided to team medicine, cross-sectional medical care, home support, etc., as stated in the Guidelines for Medical Revision.

AA　The system should be capable of proposing system construction including operational improvements.

AB　The system must be scalable enough to appropriately manage collaborative paths and hospital beds for regional collaboration. In addition, the system should provide sufficient information for pre-hospital care, etc., so that the University can provide tertiary emergency care.

AC　To ensure that the system does not become obsolete and that its functions can be maintained after it is put into operation, a method of providing maintenance services, that takes into account costs, etc. must be provided.

AD　Consideration should be given to enable smooth system modification and expansion in accordance with national policies, including the 2025 model.

AE　Information should be available so that the cost management function for hospital management and each master can be centrally managed.

AF　The proposal should actively incorporate IT innovations from industries other than medical care. In particular, active utilization in user interface and goods management is desirable.
